Summary

Senior software engineer with 12+ years of experience building high-performance, cloud-native distributed systems using .NET technologies. Strong background in event-driven architecture and concurrency in AWS environments. Experienced in leading cross-functional teams, designing scalable backend platforms, and supporting high-load production systems serving millions of users.

Certifications

- [AWS Certified Developer](#)
 - [AWS Well-Architected Proficient](#)
 - [Certified Kubernetes Developer](#)
-

Experience

Andersen — Senior .NET Engineer

Jan 2024 – Present

Design and implementation of cloud-native microservices solutions using .NET Core, AWS and Kubernetes for an enterprise-scale digital documents and licensing platform.

- Designed communication patterns and modules for distributed microservices using Kafka, RabbitMQ, and HTTP APIs
- Owned Kubernetes (AWS EKS) deployments and DevOps(Azure DevOps) practices
- Built and supported high-throughput async processing pipelines ensuring reliable and scalable document workflows
- Built AI-assisted workflows using Copilot, OpenCode, Claude including custom agents for Azure DevOps automation, code review, and internal knowledge search.

Tech: .NET Core, Asp.Net, Kubernetes, KEDA, Docker, Kafka, RabbitMQ, Redis, PostgreSQL, SQL Server, Azure DevOps, CI/CD, Copilot, Rest APIs, Angular, TypeScript, Grafana, Backends for frontends (BFF), SAGA. AWS: API Gateway, EKS, S3, RDS, DynamoDB, SQS, SNS, IAM, EC2, Lambda, AWS Cloudformation

Social Discovery Group — Development Team Lead / Senior .NET Developer

Feb 2019 – Sept 2023

Core contributor and later team lead for a large-scale distributed platform with 200+ microservices serving tens of millions of active users.

- Led a cross-functional engineering team of 7+ people
- Designed scalable architectural solutions for distributed systems
- Implemented event-driven backend services integrated through RabbitMQ deployed on Kubernetes
- Managed alert duty and production incident resolution processes
- Led delivery planning, estimation, and execution tracking across the team
- Worked closely with product and business teams to align technical delivery with business goals

Tech: .NET Core, Asp.Net Web Api, Azure, Kubernetes, Docker, RabbitMQ, Redis, MongoDB, SQL Server, Elasticsearch, Datadog, Kibana, DDD, CQRS, Database per service, Event Sourcing
